

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

Figure 1-1. Wattmeter ME-82/U.

CHAPTER 1

INTRODUCTION

Section I. GENERAL

1-1. Scope

This manual covers direct and general support maintenance for Wattmeter ME-82/U (fig. 1-1). It includes instructions for troubleshooting, testing, and repairing of the ME-82/U, and replacing maintenance parts. It also lists equipment, tools, and materials required in performing direct and general support maintenance. The maintenance allocation chart is in TM 11-5820-303-12P and the authorized repair parts lists are in TM 11-5820-303-12P and TM 11-5820-303-35P. Functioning of the ME-82/U is covered in chapter 3.

1-2. Index of Publications

Refer to the latest issue of DA Pam 310-4 to determine whether there are new editions, changes, or additional publications pertaining to the equipment. Department of the Army Pamphlet 310-4 is a current index of technical manuals, technical bulletins, supply manuals (type 4, 6, 7, 8, and 9), supply bulletins, supply catalogs (type CL), lubrication orders, and modification work orders available through publications supply channels. The index lists the individual parts (-10, -20, -35, etc) and the latest changes to and revisions of each equipment publication.

1-3. Forms and Records

a. *Reports of Maintenance and Unsatisfactory Equipment.* Use equipment forms and records in accordance with the instructions in TM 38-750.

b. *Report of Damaged or Improper Shipment.* Fill out and forward DD Form 6 (Report of Damaged or Improper Shipment) as prescribed in AR 700-58 (Army), NAVSANDA Publication 378 (Navy), and AFR 71-4 (Air Force).

c. *Reporting of Equipment Manual Improvements.* The direct reporting, by the individual user, of errors, omissions, and recommendations for improving this equipment manual is authorized and encouraged. DA Form 2028 will be used for reporting these improvements. This form may be completed by the use of pencil, pen, or typewriter. DA Form 2028 will be completed in triplicate and forwarded by the individual using the manual. The original and one copy will be forwarded direct to: Commanding General, U. S. Army Electronics Command, ATTN: AMSEL-MR-MA, Fort Monmouth, New Jersey, 07703. One information copy will be furnished to the individual's immediate supervisor (officer, noncommissioned officer, supervisor, etc).

Section II. DESCRIPTION AND DATA

1-4. Purpose and Use

The ME-82/U provides power output indications of radio transmitters while acting as a dummy load. It is used when tuning and testing radio transmitters, and its operating in-

structions are provided in the applicable radio transmitter technical manuals.

1-5. Technical Characteristics

Frequency
range 50 to 600 mc.

Power range . . . 0 to 120 watts.
 Input impedance 52 ohms.
 Type of meter . . . 200 microamperes dc, calibrated in watts, 120 watts full scale.
 Accuracy ± 5 percent.
 Type of measurement Am, fm, or cw.
 Voltage standing-wave ratio 1.2 : 1 (maximum) when terminating 52-ohm coaxial cable.
 Temperature range Up to 150° F.
 Heat dissipating facility 52-ohm resistor in an air-cooled oil bath.

1-6. Description

The ME-82/U (fig. 1-1) is 6 inches wide, 7½ inches high, and 13¼ inches long. The heat dissipating assembly consists of an oil bath and fins surrounding the dummy load resistor. A correction chart is provided on the top of the unit (fig. 1-2) for use when measuring frequencies between 50 and 200 megacycles (mc). The main components, including the two spare crystals can be reached from the bottom of the unit (fig. 3-1).

Figure 1-2. Wattmeter ME-82/U, top view.

CHAPTER 2

UNPACKING AND CHECKING

2-1. Unpacking (fig. 2-1)

The ME-82/U is shipped fully assembled and ready for use. An exploded view of the packing materials is shown in figure 2-1. The packaged box is 9¾ inches high, 8 inches wide, 14½ inches long, and weighs 17 pounds. When unpacking the ME-82/U, perform the procedures listed (a through d) below.

Caution: To avoid damage to the unit, do not thrust tools into the interior of the shipping container. Do not place the container where it is likely to fall.

- a. Remove the gummed paper tape that seals the top of the corrugated carton.
- b. Remove the corrugated protector and cushioning material.
- c. Remove the moisture-vaporproof barrier package from the shipping container.

- d. Remove the moisture-vaporproof barrier from the ME-82/U.

2-2. Checking Unpacked Equipment

- a. Check the equipment for damage incurred during shipment. Inspect the ends of the unit for coolant leakage. If the equipment has been damaged, report the damage on DD Form 6 (para 1-3).
- b. Check the equipment for completeness as listed on the packing list. Report all discrepancies (para 1-3).
- c. If the equipment has been used or reconditioned, see whether it has been changed by a modification work order (MWO). If the equipment has been modified, the MWO number will appear near the designation plate.

Note: Current MWO's applicable to the equipment are listed in DA Pam 310-4.

TM 6625-595-34-3

Figure 2-1. Wattmeter ME-82/U, packaging diagram.

CHAPTER 3

FUNCTIONING OF ME-82/U

3-1. General (fig. 3-1)

The ME-82/U consists of two assemblies: the dummy load assembly, and the measuring circuit assembly. The dummy load assembly consists of a coupler and a dummy load. The measuring circuit utilizes a portion of the coupler and conventional circuits for measuring direct current (dc).

3-2. Functioning

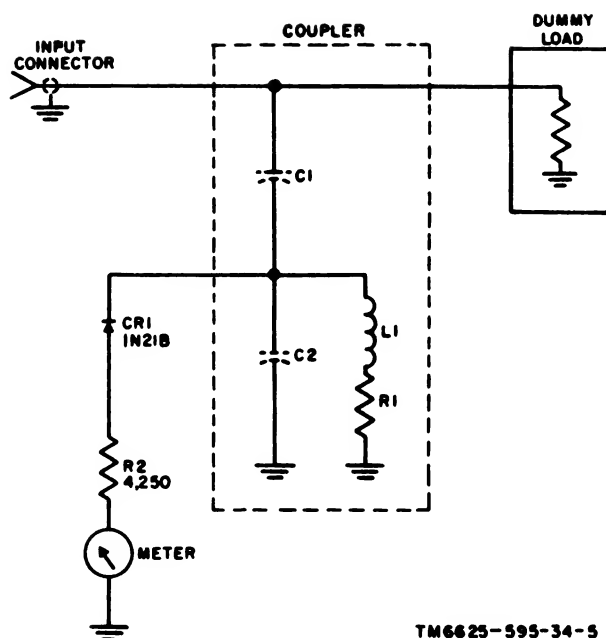

Radiofrequency (rf) input is applied through the input connector, which is physically

mounted on the coupler. The rf input is applied through the transmission line of the coupler to the dummy load for dissipation. A piece of wire (L1) is positioned adjacent to the transmission line. Coupling between the wire and the transmission line is represented by capacitor C1. Crystal diode CR1 rectifies the rf signal and causes direct current flow through resistor R2, the meter, resistor R1, and inductor L1. Capacitor C2 represents coupling from the wire to the shield of the coupler. The direct current flow through the meter is proportional to the amount of rf signal and indicated as the amount of power dissipated in the dummy load.

TM6625-595-34-5

Figure 3-2. Wattmeter ME-82/U, schematic diagram.

CHAPTER 4

MAINTENANCE

4-1. Test Equipment Required

a. Multimeter TS-352/U, TS-352A/U, or TS-352B/U.

b. Crystal Rectifier Test Set TS-268/U, TS-268B/U, TS-268C/U, TS-268D/U, or TS-268E/U.

4-2. Tests

a. *Crystal Diode Tests.* The crystal diode is tested by use of TS-268(*)/U or an equivalent substitute. Instructions for using the TS-268(*)/U are contained inside the cover of the test set.

b. *Dummy Load Resistance Measurement.* Prepare the TS-352(*)/U to measure resistance with the range switch operated to RX1. Connect one test lead to the center connector of the input connector of the ME-82/U and the other test lead to chassis ground. The TS-352(*)/U shall indicate approximately 52 ohms.

4-3. Replacement of Parts

a. *Replacement of Crystal Diode.* Replacement of the crystal diode is performed as indicated in (1) through (5) below.

- (1) Unscrew the cap connected to the coupler connector (fig. 5-1).
- (2) Lift the crystal diode from the socket in the coupler.

- (3) Remove a spare crystal diode from the spare crystal diode holder.
- (4) Hold the spare crystal diode by its body and touch one finger of the hand holding the crystal diode to ground of the coupler to discharge any electrostatic charge that may be present.
- (5) Insert the crystal diode into the socket of the coupler and replace the cap on the coupler connector.

b. *Replacement of Meter Assembly.* Replacement of the meter assembly is performed as indicated in (1) through (7) below.

- (1) Remove the cap from the coupler connector.
- (2) Remove the plastic clamp that secures the wire to the rear of the front panel.
- (3) Remove the four screws that secure the cover plate to the top of the cabinet.
- (4) Remove the cover plate with the meter assembly attached
- (5) Remove the conductors connected to the meter terminals.
- (6) Remove the three screws that secure the meter assembly to the cover plate and remove the meter.
- (7) Replace the meter by reassembling the parts in reverse sequence to the order of disassembly.

CHAPTER 5

GENERAL SUPPORT TESTING PROCEDURES

Section I. INTRODUCTION

5-1. General

a. Testing procedures are prepared for use by Signal Field Maintenance Shops and Service Organizations responsible for general support maintenance of electronic equipment to determine the acceptability of repaired equipment. These procedures set forth specific requirements that repaired electronic equipment must *meet* before it is returned to the using organization. Perform the physical tests and inspections as outlined in paragraph 5-4 before proceeding to the test in paragraph 5-5. A summary of the performance standards is given in paragraph 5-6.

b. Each test depends on the preceding one for certain operating procedures and, where applicable, for test set calibrations. Comply with the instructions preceding each chart before proceeding to the chart. Perform each test in sequence. Do not vary the sequence. For each step, perform all the actions required in the *Control settings* column, and then perform each specific test procedure and verify it against its performance standard.

5-2. Tools, Test Equipment, and Additional Equipment

All tools (*a* below), test equipment (*b* below), and additional equipment (*c* below) required to perform the testing procedures in this chapter are authorized under TA 11-17, Signal Field Maintenance Shops; TA 11-100 (11-17), Allowance of Signal Corps Expendable Supplies for Signal Field Maintenance Shops, TOE 11-158D, Signal Depot Company; and TA 11-101 (11-158), Allowance of Signal Corps Expendable Supplies for Signal Depot Company, or are repair part items of the subject equipment authorized for stockage at general support maintenance level. If these

procedures are performed with other types of test equipment, an allowance must be made for any test connection or test result that may differ from those given in these procedures.

a. *Tools.* Tools required are contained in Tool Kit, Radar and Radio Repairman TK-87/U.

b. *Test Equipment.*

Battery BA-30/U, 3 each	6135-120-1020	

^a Power Supply PP-1097A/G or PP-1097B/G.

5-3. Modification Work Orders

The tests listed in paragraph 5-5 assume that no modification work orders (MWO's) have been performed. If an MWO has been performed, allowances must be made for any change in test connections and performance standards. A current listing of MWO's will be found in DA Pamphlet 310-4.

Section II. TESTS

5-4. Physical Tests and Inspections

a. *Test Equipment and Materials.* Light Assembly, Electric MX-1292/PAQ.

b. *Test Connections and Conditions.*

- (1) Do not make any connections to the equipment.
- (2) Perform the following checks after repairs are completed, prior to reassembly of the equipment.
- (3) Connect the MX-1292/PAQ to a 115-volt, 60-cycle source and install the wide band transmission filter.

c. *Test Procedure.*

Step No.	Control settings		Test procedure	Control settings Performance standard
	Test equipment	Equipment under test		
1	N/A	N/A	<p>a. Inspect case, cooling fins, and connectors for looseness, missing parts, and damage.</p> <p>b. Inspect meter for legibility and evidence of damage.</p> <p><i>Caution:</i> Before inserting the crystal diode into the socket, hold the crystal diode by its body and touch one finger of the hand holding the crystal diode to the ground section of the socket to discharge any electrostatic charge that may be present.</p> <p>c. Remove crystal CR1 from resistor-coupler assembly and spare crystals from holder. Inspect for damage and correct number and type.</p> <p>d. Inspect the cable for condition of insulation.</p> <p>e. Inspect metal surfaces for condition of finish.</p> <p><i>Note:</i> Touchup painting is recommended in lieu of refinishing whenever practicable.</p> <p>f. Check equipment for applicable MWO's and note any MWO's not performed. (See DA Pam 810-4 for a list of MWO's.)</p>	<p>a. There should be no evidence of damage, or loose or missing parts. All connectors should be securely mounted.</p> <p>b. Meter scale should be legible. Glass should be intact and meter should show no evidence of damage.</p> <p>c. Crystals should show no evidence of damage. Crystal type should be 1N21B. There should be 2 spare crystals.</p> <p>d. Insulation should be free from cracks and fraying.</p> <p>e. All metal surfaces intended to be painted should not show bare metal.</p> <p>f. If MWO is performed, MWO number appears on equipment.</p>
2	MX-1292/PAQ 245V FOR M. V. Lamp: ON	N/A	<p>a. Expose chassis to direct rays of MX-1292/PAQ and inspect condition of moisture and fungiproofing (MFP) varnish.</p> <p><i>Note:</i> MFP varnish appears blue-green when exposed to rays of the MX-1292/PAQ.</p> <p>b. Turn off the MX-1292/PAQ.</p>	<p>a. Meter terminal connections and all bare metal (except connector contacts and spare crystals) should be completely covered with MFP varnish.</p> <p><i>Note:</i> Do not apply varnish to parts that were not originally finished with MFP varnish.</p> <p>b. None.</p>

5-6. Summary of Test Data

Personnel may find it convenient to arrange a checklist in a manner similar to that shown below.

Test No.	Description	Performance standard	Test data
	Crystal Diode Tests		
1e	Forward resistance	Forward resistance should not be greater than 0.5 kilohm (500 ohms).	_____
1f	Ratio of reverse to forward resistance.	Ratio of reverse to forward resistance should be greater than 10 to 1.	_____
1h	Reverse current	Meter pointer should indicate out of POOR (green) area of colored scale.	_____
1j	Spare crystal diodes forward and reverse resistance, and reverse current tests.	Same as 1e, 1f, and 1h above.	_____
2f	Dummy load resistance test	I-49(*) galvanometer is balanced at 52 ohms ± 2 .	_____
3h	WATTS meter sensitivity test	WATTS meter on ME-82/U indicates 120 and TS-682(*)/GSM-1 meter indicates 200 microamperes ± 4 .	_____
